Waste Electrical & Electronic Equipment Packs from SCA Packaging

Designed to facilitate the storage and shipment of recovered electronic and electrical goods, this range of high performance heavy duty packs offers an ideal solution to customers working to the guidelines of the WEEE directive.

Packs have been designed for a range of functions including single trip and returnable applications, point of sale packs, security cases and a fluorescent tube pack.

Single trip and re-usable bulk box

This one use pallet box is ideal for use in the office environment. Boxes are delivered by re-cycling operations to offices in small batches flat packed. Items such as old phones, lamps, computers etc can be loaded by the office staff for collection by the re-cycling contractor.

Re-cycling companies generate various waste streams such as glass, copper, plastics etc. These can be collected from the machine's outputs in our re-usable boxes. Domestic deliveries of such waste streams can be made and the boxes returned to begin the process again.

Retail recycling box

This box is ideal for "front of store" collection. Any retailers not taking part in the "distributor take back scheme" will have to offer in store collection. These cases are ideal for such collection. High definition print is advised to guide your customers.

Security box

Returned items of value such as phones, laptops etc can be securely stored in these boxes which have tamper evident seals.

Fluorescent lamp box

With the constant turnover in fluorescent lamps this box offers a safe and clean method of disposal. Once filled these boxes can be taken away by your re-cycling company and disposed of safely.
